

SY1003

High and low voltage CT online comprehensive tester

National patent , NO: ZL201420867930.2

It can be used to measure the high-voltage current transformer ratio and polarity online and judge whether the CT wiring is correct below 35kV.

It can measure the load power and power factor to help analyze the wattourmeter wiring is correct.

Low-voltage flexible current coil are suitable for busbar measurement.

The high voltage current clamp has high accuracy of 0.5 class and resolution of 0.001A.

It can be used as a high voltage clamp ammeter (600A/100A), low voltage flexible clamp ammeter (3000A), high precision leakage current meter (10A), AC voltmeter (500V), AC power meter (high voltage, low voltage, high current, low voltage twice), high-voltage CT variable ratio polarity tester, low-voltage CT variable ratio polarity tester, single-phase phase voltmeter, single-phase power quality analyzer, etc.

With bluetooth and USB interface, it can be connected to Android phones. The online app allows users to explore more functions.

SY3002H

High and low voltage wattourmeter comprehensive tester

Intelligent three-phase wattourmeter calibrator added with one high voltage current clamp and a low voltage flexible current coil.

It can measure the ratio, polarity and phase sequence of CT between primary and secondary. The CT polarity measurement results can be used to help judge in the secondary wiring. Such case is not necessary to set the load type.

With bluetooth and USB interface, it can be connected to Android phones. The online app allows users to explore more functions.
